ATS Integration Flow

Overview

This document describes how backend systems interact with the ATS AI.

Flow Steps

1. Resume Upload Client uploads resume via API
2. Resume Parsing Backend extracts structured text
3. Job Description Parsing JD is processed into structured format
4. Scoring AI compares resume and JD
5. Shortlisting Candidates are filtered into categories
6. Output Results returned as JSON

Async Handling

- Resume processing can be queued
- Scoring can run in background jobs
- Results stored in database

Error Handling

- Invalid file format → 400 error
- Missing file → 404 error
- Server failure → 500 error

Logging

- Each request logged
- Errors tracked
- Scores stored for auditing
