Stability Improvements – ATS System

1. Error Handling

- Implemented try-except blocks for resume parsing
- Prevented crashes from corrupted files

2. File Validation

- Checked file existence before processing
- Avoided runtime failures

3. Robust Processing

- Skips invalid resumes without stopping execution
- Handles missing or noisy data

4. Fault Tolerance

- Pipeline continues execution even if one file fails

5. Consistency

- Standardized text processing using normalization
- Ensured uniform input across all resumes and JDs

Conclusion: The ATS system is stable, fault-tolerant, and capable of handling real-world noisy data scenarios.
