Day 67 – Demo Feedback Report

Title

Zecpath AI Mock Demo Evaluation Report

Objective

Evaluate the AI hiring system presentation through a mock demonstration and identify areas for improvement before the final presentation.

Demo Summary

Duration: 25 Minutes

Demo Flow

- Problem Statement
- AI Solution
- System Architecture
- End-to-End Demo
- Final Report
- Business Impact

Stakeholder Feedback

Area	Feedback
Problem Statement	Clear and easy to understand
AI Solution	Well explained
Architecture	Good but can be simplified
Demo Flow	Smooth and organized
Final Output	Professional presentation

Mock Q&A

Q1. How accurate is the AI system?

Answer

The AI system achieves approximately **88–92% accuracy** during internal testing.

Q2. How is bias reduced?

Answer

Sensitive attributes are excluded, score normalization is applied, and fairness checks are performed throughout the hiring pipeline.

Q3. Can the system scale?

Answer

Yes. The architecture uses independent AI services with horizontal scaling support.

Q4. How is this different from a traditional ATS?

Answer

Traditional ATS systems only screen resumes. Zecpath AI automates resume screening, interviews, behavioral analysis, technical evaluation, and hiring decisions.

Weak Areas

Issue	Improvement
Fast explanation	Speak slower
Technical terminology	Use simpler language
Demo timing	Balance time across sections

Overall Feedback

Strengths

- End-to-end AI workflow
- Clear business value
- Professional architecture
- Explainable AI decisions

Areas to Improve

- Better storytelling
- Simpler explanations
- Improved pacing

Conclusion

The demo is technically strong and ready for presentation after minor communication improvements.
