Day 69 – AI Internship Portfolio

Title

Zecpath AI Developer Internship Portfolio

Project Overview

The **Zecpath AI Hiring System** is an end-to-end AI-powered recruitment platform developed during a 70-day internship project. The system automates candidate evaluation from resume screening to final hiring decisions.

Project Objectives

- Automate resume screening using ATS
- Conduct AI-based screening interviews
- Evaluate HR and technical interview performance
- Analyze behavioral and integrity signals
- Generate explainable hiring decisions
- Provide recruiter-friendly reports

Key Features

- Resume Parsing
- ATS Scoring Engine
- Screening AI
- HR Interview AI
- Technical Interview AI
- Machine Test Evaluation
- Behavioral Analysis
- Integrity Detection
- Decision Engine
- Report Generation

Technology Stack

- Python
- Streamlit
- Sentence Transformers

- Scikit-learn
- Pandas
- NumPy
- Docker
- REST APIs

Project Highlights

- Complete AI hiring workflow
- Modular microservice architecture
- Explainable AI scoring
- Production-ready design
- Security and governance support
- Performance optimization

Major Deliverables

- Resume Parser
- ATS Engine
- Screening AI
- HR AI
- Technical AI
- Behavioral AI
- Integrity Detection
- Decision Engine
- Reporting Module
- Monitoring & Logging
- Documentation
- Demo Dataset

Skills Demonstrated

- Artificial Intelligence
- Natural Language Processing
- Machine Learning
- Software Architecture
- API Design
- System Integration
- Performance Optimization
- Documentation

Outcome

The internship project successfully demonstrates a scalable AI hiring platform capable of supporting intelligent recruitment workflows.

Conclusion

The Zecpath AI Hiring System showcases practical implementation of AI technologies for recruitment automation and provides a strong foundation for future enterprise deployment.
