HR Interview AI Developer Handbook – Zecpath

Objective

This handbook provides integration guidance, scoring logic, troubleshooting instructions, and maintenance information for developers.

Integration Workflow

Step 1

Call Start Interview API

```
POST /start
```

Receive:

- Session ID
- Initial Questions

Step 2

Collect Candidate Responses

Supported Input:

- Voice
- Text

Step 3

Submit Answers

```
POST /answer
```

Receive:

- Follow-up Question
- Next Question

Step 4

Continue Until Completion

Repeat answer submission until interview ends.

Step 5

Generate Final Report

```
GET /report/{session_id}
```

Receive:

- Final Score
- Hiring Recommendation
- Summary

Scoring Logic

HR Score Formula

HR Score = (Relevance × Weight)

-

(Communication × Weight)

-

(Confidence × Weight)

-

(Consistency × Weight)

Unified Score Formula

Final Score = (ATS × 0.30)

-

(Screening × 0.30)

-

(HR × 0.40)

Troubleshooting Guide

Issue	Solution
No response detected	Retry STT
Wrong intent classification	Improve intent keywords
Low score anomaly	Verify normalization
API timeout	Retry request
Missing report	Validate session ID

Debug Checklist

- API logs verified
- Inputs validated
- Scores within expected range
- No missing fields
- Model outputs reviewed

Maintenance Guidelines

Weekly:

- Review logs
- Validate scoring consistency

Monthly:

- Update question bank
- Re-test interview flows

Quarterly:

- Review fairness metrics
- Audit AI decisions

Advantages

- Modular architecture
- Easy integration
- Recruiter-friendly outputs
- Scalable deployment

Limitations

- Some rule-based components
- Requires backend infrastructure
- Limited real-time learning

Future Roadmap

- AI SDK
- Real-Time Streaming APIs
- Adaptive Learning
- Advanced Explainability Dashboard

Test Script

```
def test_api_format():
    response = {
        "candidate_id": "C1",
        "final_score": 80
    }

    assert "candidate_id" in response
```
