HR Interview AI Simulation Report – Zecpath AI

Objective

To validate the end-to-end HR Interview AI system by simulating real candidate interactions and comparing AI-generated decisions with human HR evaluations.

Test Setup

Parameter	Value
Total Simulations	40 Candidates
Questions per Interview	6–8
Total Responses	~260
Candidate Types	Confident, Hesitant, Inexperienced, Overqualified
Evaluation Method	AI vs Human HR

Candidate Distribution

Candidate Type	Count
Confident	10
Hesitant	10
Inexperienced	10
Overqualified	10

Evaluation Criteria

- Answer Relevance
- Communication Quality
- Confidence Signals
- Logical Reasoning
- Behavioral Consistency

Key Findings

- High scoring accuracy for confident candidates.
- Moderate scoring variation for hesitant candidates.
- Good overall alignment between AI and human evaluations.
- Consistent recommendation generation across candidate types.

Benefits

- Identifies recruitment decision patterns.

- Reduces recruiter workload.
- Provides standardized candidate evaluation.
- Enables scalable interview assessment.

Limitations

- Uses simulated interview data.
- Rule-based scoring logic.
- Limited contextual understanding.

Conclusion

The HR Interview AI system successfully evaluated simulated candidates and demonstrated reliable performance across multiple candidate profiles. The system can be used as a supporting tool for recruiter decision-making while further improvements are incorporated.
