Improvement Recommendations – Zecpath AI

Identified Issues

Issue	Impact
Overweight on hesitation	Penalizes capable candidates
Short answers misjudged	Unfair score reduction
Scenario answers underweighted	Misses problem-solving skills
Confidence vs competence imbalance	Possible misclassification

Recommended Model Improvements

Communication Analysis

- Improve short-answer understanding.
- Detect meaningful concise responses.
- Reduce penalty for hesitation words.

Confidence Assessment

- Balance confidence and competency scoring.
- Avoid over-reliance on speech confidence indicators.

Contextual Evaluation

- Add contextual answer interpretation.
- Improve scenario-based question scoring.

Updated Scoring Weights

```
UPDATED_WEIGHTS = {
    "relevance": 0.35,
    "communication": 0.20,
    "confidence": 0.20,
    "consistency": 0.25
}
```

Future Enhancements

- LLM-based answer evaluation.
- Context-aware reasoning engine.
- Personalized recruiter insights.
- Continuous learning feedback system.
- Advanced cultural fit analysis.

Final Recommendation

The HR Interview AI system is suitable for controlled deployment. Continuous improvements in contextual understanding and communication analysis can further improve accuracy and recruiter trust.
