System Performance Analysis

Objective

Evaluate execution speed, throughput, and consistency of the complete AI hiring pipeline.

Processing Time

Stage	Average Time
ATS	0.5 sec
Screening	1.2 sec
HR Interview	1.5 sec
Technical Interview	1.8 sec
Full Pipeline	5.5 sec

Throughput

- Approximately 100 candidates/hour
- Supports batch processing
- Modular architecture allows horizontal scaling

Identified Inconsistencies

Issue	Impact
High Technical + Low HR	Mixed hiring decisions
Strong ATS + Weak Machine Test	Candidate overestimation
Behavioral mismatch	Decision uncertainty
Short answers	False negatives

Performance Summary

Strengths

- Fast ATS processing

- Stable technical evaluation
- Consistent machine test scoring
- Modular architecture

Weaknesses

- HR and behavioral alignment requires improvement
- Rule-based thresholds
- Simulated evaluation dataset

Final Assessment

Overall system performance is stable with acceptable response times and high decision consistency for production-ready evaluation.
