Confidence & Stress Indicators – Zecpath AI

Objective

To evaluate candidate confidence and behavioral signals during AI interviews.

Key Signals

Signal	Description
Hesitation	Filler words
Repetition	Word redundancy
Uncertainty	Confidence-related phrases
Pause	Speaking speed estimation
Sentiment	Emotional tone
Stress	Nervous indicators
Contradiction	Logical inconsistency

Confidence Formula

Confidence Score =

(Repeat × 0.25) + (Hesitation × 0.25) + (Uncertainty × 0.25) + (Pause × 0.25)

Behavioral Score Formula

Behavioral Score =

(Confidence × 0.5) + (Sentiment × 0.2) + (Stress × 0.3)

Advantages

- Captures confidence indicators
- Evaluates communication quality
- Supports AI screening decisions
- Produces explainable scores

Limitations

- Rule-based detection
- No voice-tone analysis
- Limited emotional understanding

Future Improvements

- Emotion recognition
- Voice analysis
- ML-based behavioral scoring
- Multilingual support
