Candidate Decision Output Format – Zecpath AI

Objective

Provide a standardized, explainable decision object after evaluating all interview stages and applying risk adjustments.

Sample Decision Output

```
{
  "candidate_id": "C10001",
  "final_score": 82,
  "adjusted_score": 75,
  "decision": "Selected",
  "confidence_score": 88,
  "risks": {
    "behavior": "Low Risk",
    "integrity": "Moderate Risk"
  },
  "explanation": {
    "reason": "Strong overall performance with minor integrity concerns",
    "strengths": [
      "High technical score",
      "Good communication"
    ],
    "weaknesses": [
      "Minor distraction signals"
    ]
  }
}
```

Decision Categories

Decision	Description
Selected	Candidate meets hiring criteria and has acceptable risk.
Hold / Review	Candidate requires manual review before a final decision.
Rejected	Candidate does not meet score or risk requirements.

Decision Process

1. Collect final aggregated hiring score.
2. Apply behavior and integrity risk penalties.
3. Compare adjusted score with decision thresholds.
4. Calculate confidence score.
5. Generate explainable output.
6. Produce final recommendation.

Decision Thresholds

Adjusted Score	Decision
80–100	Selected
60–79	Hold / Review
Below 60	Rejected

Confidence Score

The confidence score reflects the consistency of candidate performance across evaluation stages.

- High Confidence: 85–100
- Medium Confidence: 70–84
- Low Confidence: Below 70

Explainability

Each recommendation includes:

- Final decision
- Confidence score
- Risk factors
- Candidate strengths
- Candidate weaknesses
- Reason for recommendation

Benefits

- Transparent hiring decisions
- Consistent evaluation
- Recruiter-friendly output
- Explainable AI recommendations
