Developer Onboarding Guide

Welcome

Welcome to the Zecpath AI Hiring Platform.

This guide helps developers set up the project and understand the overall architecture.

Prerequisites

- Python 3.10+
- Git
- VS Code
- Docker (Optional)
- PostgreSQL

Project Setup

Clone Repository

```
git clone <repository_url>
```

Create Virtual Environment

```
python -m venv venv
```

Activate Environment

Windows

```
venv\Scripts\activate
```

Linux/Mac

```
source venv/bin/activate
```

Install Dependencies

```
pip install -r requirements.txt
```

Run Tests

```
pytest
```

Start Application

```
python app.py
```

Project Structure

```
Ai-Recruiting-New/

ai_core/
api/
behavior_ai/
integrity_ai/
machine_test/
parsers/
screening_ai/
observability/
tests/
docs/
utils/
```

Development Workflow

1. Create feature branch
2. Implement feature
3. Write unit tests
4. Verify all tests

5. Create Pull Request
6. Code Review
7. Merge

Coding Standards

- Follow PEP-8
- Use type hints where applicable
- Keep modules independent
- Add logging
- Write tests

Testing

Run all tests

```
pytest
```

Run specific test

```
python -m tests.test_resume_parser
```

Logging

Use centralized logging.

Never use print statements inside production modules.

Documentation

Update documentation whenever:

- API changes
- Architecture changes
- New AI module added
- Database changes

Troubleshooting

Import Errors

Check virtual environment.

Verify PYTHONPATH.

Module Not Found

Ensure **init**.py exists.

API Errors

Check logs.

Validate request payload.

Performance Issues

Check cache.

Monitor response times.

Best Practices

- Modular Design
- Reusable Functions
- Proper Exception Handling
- Unit Testing
- Documentation
- Code Reviews

Contribution Guidelines

Every new module should include:

- Source Code
- Tests
- Documentation
- Example Usage
