Transcript Metadata Standards – Zecpath AI

Objective

The Transcript Metadata Standards define the structure, consistency, and traceability rules for storing and processing AI-based voice interview transcripts in the Zecpath ATS AI system.

The goal is to ensure:

- Structured transcript storage
- AI-ready processing
- Multi-language support
- Auditability and scalability

---

1. Core Metadata Fields

Field Name	Description
transcript_id	Unique transcript identifier
candidate_id	Unique candidate identifier
job_id	Associated job role ID
question_id	Screening question reference
question_text	Question asked during interview
answer_text	Candidate response text
confidence_score	Speech-to-text confidence score
start_time	Start timestamp of answer
end_time	End timestamp of answer
duration_seconds	Duration of response
language	Spoken language
overall_confidence	Average confidence of transcript
created_at	Transcript creation timestamp

---

2. Metadata Design Principles

Consistency

All transcripts must follow a standardized schema structure.

Traceability

Every answer should map to:

- Candidate
- Job
- Question

Auditability

System should store:

- Timestamps
- Confidence scores
- Processing history

Scalability

Architecture should support:

- Multi-language interviews
- Multiple interview rounds
- Large-scale transcript storage

---

3. Transcript Structure Example

```
{
  "transcript_id": "T123",
  "candidate_id": "C123",
  "job_id": "J101",
  "language": "en",
  "conversation": [
    {
      "question_id": "Q1",
      "question_text": "Can you introduce yourself?",
      "answer_text": "I am a backend developer.",
      "confidence_score": 0.94,
      "start_time": "00:00:02",
      "end_time": "00:00:10",
      "duration_seconds": 8
    }
  ],
  "overall_confidence": 0.92,
  "created_at": "2026-04-21T10:00:00Z"
}
```
