AI Fairness Evaluation Report

Objective

To assess and improve fairness within the AI recruitment and HR interview evaluation system.

Bias Analysis

Risk Area	Action Taken
Name Bias	Removed from scoring
Gender Bias	Not used in evaluation
Accent Bias	Normalized through transcript cleanup
Education Bias	Reduced scoring weight

Fairness Improvements Implemented

- Candidate names removed from scoring logic.
- Gender information excluded from evaluation.
- Accent-related variations normalized.
- Education influence reduced to prevent unfair advantages.
- Balanced scoring weights applied.

Fairness Metrics

Metric	Result
Bias Detection	Low
Score Variance Across Groups	Reduced
Fairness Compliance	90%

Evaluation Findings

Strengths

- Consistent scoring logic
- Reduced demographic influence

- Improved score normalization

Areas for Improvement

- Real-time bias detection
- More advanced fairness monitoring
- Periodic fairness audits

Fairness Validation Checklist

- No demographic signals used
- Name removed from scoring
- Location excluded from ranking
- Balanced scoring weights
- Explainable decisions available

Recommendations

1. Add fairness monitoring dashboard.
2. Implement periodic bias audits.
3. Track fairness metrics continuously.
4. Use anonymized candidate profiles during evaluation.

Conclusion

The system demonstrates strong fairness practices by removing demographic signals and applying standardized scoring logic. Additional monitoring mechanisms can further improve fairness and transparency.
