# Unified Candidate Score Object – Zecpath

## Objective

Represent the complete evaluation of a candidate by combining scores from all hiring stages into a single transparent object.

---

# Candidate Score Structure

```
{
    "candidate_id": "C9001",
    "scores": {
        "ats": 75,
        "screening": 70,
        "hr": 80,
        "technical": 85,
        "machine_test": 78
    },
    "weights": {
        "ats": 0.15,
        "screening": 0.10,
        "hr": 0.15,
        "technical": 0.35,
        "machine_test": 0.25
    },
    "final_score": 80.10,
    "decision": "Hire",
    "hiring_fit": {
        "hiring_fit_percentage": 80.10,
        "fit_category": "Strong Fit"
```

```
    }
}
```

# Explainable Score Breakdown

```
{
    "explanation": {

        "ats": "Good resume-job match",

        "screening": "Clear responses with minor gaps",

        "hr": "Strong communication and confidence",

        "technical": "High technical depth",

        "machine_test": "Good practical coding performance"
    }
}
```

# Hiring Decision Levels

| Final Score | Decision |
|---|---|
| 85–100 | Excellent Fit |
| 70–84 | Strong Fit |
| 55–69 | Moderate Fit |
| Below 55 | Low Fit |

# Final Score Formula

```
Final Score =

(ATS × Weight)

+

(Screening × Weight)

+
```

```
(HR × Weight)

+

(Technical × Weight)

+

(Machine Test × Weight)
```

# Role-Based Weight Example

| Stage | Weight |
|---|---|
| ATS | 20% |
| Screening | 15% |
| HR Interview | 20% |
| Technical Interview | 25% |
| Machine Test | 20% |

# Benefits

- Combines every hiring stage
- Recruiter-friendly
- Explainable AI scoring
- Consistent candidate comparison

# Future Improvements

- Dynamic weight optimization
- ML-based scoring
- Continuous learning from hiring outcomes
