Zecpath Technical Interview Flow Design

Objective

Define the complete interview flow for a role-based adaptive technical interview.

Technical Interview Flow

```
 Generate Technical Report
                  |
                  ▼
                 END
```

Interview States

State	Description
Start	Interview Initialized
Introduction	Candidate Introduction
Experience Detection	Years of Experience Classified
Skill Mapping	Role Skills Loaded
Question Generation	Technical Questions Generated
Answer Evaluation	AI Evaluates Candidate Answer
Difficulty Adjustment	Question Level Updated
Technical Scoring	Score Computed
Report Generation	Final Technical Report
Completed	Interview Finished

State Transitions

```
START
   ↓
INTRODUCTION
   ↓
EXPERIENCE DETECTION
   ↓
ROLE MAPPING
   ↓
QUESTION GENERATION
   ↓
ANSWER EVALUATION
   ↓
DIFFICULTY ADJUSTMENT
   ↓
QUESTION GENERATION
        ↑
        |
 (Repeat until interview ends)
```

```
        |
        ▼
TECHNICAL SCORING
   ↓
REPORT GENERATION
   ↓
END
```

Design Principles

- Adaptive questioning
- Progressive difficulty
- Role-specific evaluation
- Explainable scoring
- Modular architecture
- Scalable interview pipeline

Future Enhancements

- Live coding interviews
- AI-generated coding problems
- LLM-based code review
- Real-time IDE integration
- Automatic plagiarism detection
